

Water Cycle

(6 is the phase that creates clouds.)

*3, 4, and 6 are the different phases

Label:

1) **Sun**

2) **Clouds**

3) **Evaporation**

4) **Precipitation**

5) **Collection (ocean)**

6) **Condensation**

Phase	What is it?	What makes water go through this phase?	Why is it important?	What state of matter? Example: liquid to a gas	Sketch a picture has to do with the phase.
Evaporation		heat		liquid to gas	
Condensation		cool		gas to liquid	
Precipitation		heavy H₂O droplets		liquid or solid
